Room for Negotiation	35	Company Size and Product Categories of the Participants	61
Arguments Accepted – Ranking	36	Final Remarks from the Survey Respondents	62
Arguments Not Accepted – Ranking	37	Summary and Conclusions	64

Note:

This study would certainly not meet the strict requirements or the degree of representation of a scientific investigation. The results are exclusively on data of 188 anonymous questionnaires from automobile suppliers in Germany and France. They all contained very individual experiences in their business practice. Put together into an overall picture, the results are certainly in line with plausibility checks.
